

Test Cell Command Center

TC³

INSTRUMENTATION

The Taylor Dynamometer Test Cell Command Center (TC3) is designed to provide a single point of connection and control for all of your basic test cell support functions. This is a stand-alone system that consolidates your test cell control requirements, such as water systems and HVAC systems. For complete test cell automation, the TC3 may be connected to our DynPro systems.

Operators are able to command devices through the TC3 and never leave the comfort and safety of the control room. The TC3 is capable of controlling eight on/off devices and allows for the simple analog open-loop control of two devices. The standard TC3 system will accommodate most test cell requirements and custom applications are always available upon request.

The TC3's enclosure is 8in deep x 19 1/2in high x 19 1/2in wide and is wall mounted.
