

Junction Box Retrofit Kit / Instrumentation

Junction Box Retrofit Kit

The DynPro₂ Junction Box Retrofit Kit (for engine and chassis dynamometers) is used for retrofitting a DynPro₂ system onto an older dynamometer. The kit allows for the proper connection requirements when there is little or no room on the dynamometer to mount the standard dynamometer interconnect enclosure or to adapt DynPro₂ to most non-Taylor dynamometers.

Junction Box Retrofit Kit includes:

- Dyno junction box
- Cord grip fittings (6)
- Hole covers (6)
- Solenoid kit (1) includes: solenoid, hose fittings, hose clamps and hose 25 ft. (7.62 m)
- Wall mounting kit (1)
- Base mounting kit (1)

Everything you need to succeed
