

Surface Pro Tablet / Instrumentation

Protective Cover

The Surface Pro Tablet provides the perfect balance of size and power. It offers a 12 in (305 mm) LCD multi-touchscreen, long battery life, lightweight and compact design. The pen stylus makes it easy to navigate between applications.

All screens, functions and capabilities are equally accessible through the Surface Pro or a PC. The only difference is that the Surface Pro incorporates the touchscreen interface versus the traditional point-and-click of a PC.

The Surface Pro comes with a protective cover for greater durability and superior protection. The cover is dust resistant, shockproof and splashproof. It also features an adjustable 360° rotating handle and comfortable strap for a secure grip.

For Engine Dynamometer and Hydraulic Test Center (HTC) Applications the Surface Pro is an optional accessory item that allows the operator complete control away from the test cell and/or testing equipment yet still provides access to the data acquisition and control system. This is a great capability to have for system calibration, troubleshooting and more.

For Chassis Applications The Surface Pro is the standard user interface for system operation. The wireless handheld provides complete control of the system right from the vehicle.

Everything you need to succeed
